

## Helpful Hints (for Pink & White gel application)

- Remember to remove tacky residue from the Baby Pink Color Gel or Gel Base with LeChat Gel Cleanser after curing before you begin to apply White color Gel.
- When doing Pink and White, it is helpful to have a second Gel Brush to use for cleaning and creating smile line.
- After you have applied the White color Gel and have drawn your smile line, cure that finger for 30sec. while you move on to another finger on the opposite hand. This will keep the color gel from moving while you finish the other nails.
- If there is shrinkage of the white gel after it has been cured, use your Gel Brush to pick up a small amount of white gel and lightly fill in the area. Allow 3-5 sec. for the gel to even out, then cure.
- When doing a Pink & White Gel re-fill, remember to thin out some the old product. Do not have to remove all the Pink & White Gel completely, but to allow room to add more product without making the nail bulky.

## Pink and White Gel Re-fill Application

1. Sanitation: Clean your hands and your clients' hands with LeChat Gel Cleanser nail Preparation Solution prior to the application of the Powder Gel® Nail System. Remove polish if necessary. Gently push back cuticle.
2. Removal of Gel Top Coat: Begin to remove shiny Gel Top Coat and etch the new growth using a LeChat 100/180 grit Zebra file. Thin out the old White Gel (do not have to remove Pink and White Gel off completely, but to allow room to add more product without making the nail bulky). Re-shape and bevel nails to desired shape. Remove dust using nail brush, then spray and clean nails using LeChat Gel Cleanser and lint free wipes.
3. Apply LeChat primer (optional): Apply a small amount of primer to new growth only. Make sure to avoid cuticle area. Let Primer dry to a chalky white finish.
4. White fill-in: Begin by applying Gel Base only without powder over entire nail starting 1mm from cuticle. Cure under UV light for 15 seconds. Remove from UV light, spray and wipe off sticky residue with Gel Cleanser. Using LeChat Gel Brush, apply White Gel onto free edge and begin to create a new smile line. Cure under UV light for 30 seconds. (Suggestions: Draw one finger at a time when applying white gel. Move from hand to hand while curing, and repeating for all fingers.)
5. Pink fill-in: Using LeChat Gel Brush, apply Baby Pink Color Gel to new growth area where needed. Cure under UV light for 30 seconds. (Complete one hand before curing)
6. Balance and Build: Apply one layer of Gel Base approximately 1mm from cuticle down to free edge. Be sure to cover completely around the white area and cap off the free edge. Sprinkle Powder Gel® over entire nail while turning clients finger from side to side to ensure complete coverage. Cure under UV light for 15 seconds. At this time, build to make the nail thicker or create more curve using more Gel Base and powder if necessary. Cure for 2 minutes.
7. File and bevel nails to desired shape, buff with LeChat white block buffer. Brush off dust using a nylon nail brush, spray and wipe nails using LeChat Gel Cleanser.

***Finish by applying Gel Top Coat (red bottle) as in basic instructions.***
